

The 2021 (virtual) IPS conference is now open for registration and abstract submission

Dear all,

We are happy to announce that the registration and abstract submission for the 2021 (virtual) IPS conference is now open.

Please note that there are a few changes regarding the conference this year, beyond its virtual nature that is imposed on us.

As part of the setting up of new topical IPS divisions, management of topical sessions (including abstract selection) will be handled by the 5 new divisions that are already operating:

- Astrophysics, Planetary and Space Science (APSS)
- Atomic and Molecular (AMO)
- Condensed Matter physics (CM)
- Non-Linear and biophysics
- Particle and high-energy physics

Members who do not consider their work to be within the domains of the above divisions, are invited to submit abstracts under the heading

- Additional Physical Disciplines

Based on the abstracts received, additional topical sessions will be set up by the organizers.

We also plan to hold special sessions on

- Physics in industry
- Physics in education

And additional special sessions are considered, stay tuned.

We are happy to announce that the virtual conference will include a keynote talk by Prof. Suvi Gezari (STScI) who will discuss the physics of black holes.

We are also excited to inform you that a talk by Marc Abrahams, the originator of the annual Ig Nobel prize ceremonies will end the conference.

With best regards,

The organizing committee.
