

Next IPC - March 08 - Prof. Cora Dvorkin

Meeting ID: 951 7512 2285

Passcode: 071333

ISRAEL PHYSICS COLLOQUIUM

Prof. Cora Dvorkin
Harvard University, USA

Monday | March 08, 2021 | 16:00

Discovering New Physics with Cosmological Data Sets

Measurements of the Cosmic Microwave Background and the large-scale structure of the universe have made it possible to determine with great precision the universe's inventory, as well as properties of its initial conditions. However, there are profound questions that remain unanswered. Cosmological observations and galaxy dynamics seem to imply that 84% of all matter in the universe is composed of dark matter, which is not accounted for by the Standard Model of particles. The particle nature of dark matter is one of the most intriguing puzzles of our time. The wealth of knowledge which is and will soon be available from cosmological surveys will reveal new information about our universe. I will discuss how we can use new and complementary data sets to identify new physics at different scales.
